

A-FRAME SYSTEM

Introducing our A-Frame support system. Solar Steel Design manufactures specialist green roof support systems for both landscape and portrait PV support A Frames. We can raise the panels to suitably clear the live vegetation thus avoiding any potential shading issues, The system is ballasted to protect the roof membrane and allow the green roof to easily grow in and around the structure.

KEY FEATURES

Any replication or use of it's design is strictly prohibited without our consent.

© PROPERTY OF USS MANUFACTURING LTD.

We have created a framework designed as with all our other framework to be installed with ease and efficiency. There is no need to drill our framework or the roof membrane for installation thus eliminating any damage or water leakage. Weighted down accordingly by ballast the framework can withstand high wind loads capable of up to a 45-degree tilt for thermal collectors and 10-degree tilt for the PV system. Manufactured from galvanized steel channel and bracketry each frame support will exceed the lifetime of any solar or PV panel

Available to support a wide range of various solar modules without the need for any adjustment to the framework.
